For the Glasstec fair in Düsseldorf Octatube has realized a glass wall for Schott AG, that incorporates several of their new products, such as glass tubes. The undulating wall is 2.8 meters high and 12 meters long. The largest challenge was to realize a transparent wall and maximize the potential of the glass tubes.

The middle tubes are illuminated by LEDs, showing the possibilities of lighting in combination with these sandblasted glass tubes. Beyond this specific application of glass tubes the wall is a real design object that will fit in different interior spaces.
