BICYCLE ENTRANCE DANZIGERKADE

Architect	DEDATO
Client	HEREN2
Location	AMSTERDAM
Year	2019

07763

The entrance to the underground bicycle parking garage under the Danzigerkade in Amsterdam is light and transparent. On top of the trusses, stainless steel clamping plates hold the large glass panels in place. The space between the panels is filled so that the glass facades act as a stabiliser. A stainless steel traction cable ensures that the glass panels are held in place. Combined, they form solid construction.

The 130-metre wide and almost 500-metre long strip at the Danzigerkade, surrounded on three sides by water, has become a hub for fashion brands. A place that you can visit easily by bike.
